PHONE: (404) 775-8896

EMAIL: ANNALEESYLVESTER@GMAIL.COM

LOCATION: BURBANK, CA 91505

PORTFOLIO: <https://asylvestercat.github.io/>

Technical Skills

Programing Languages: JavaScript, TypeScript, HTML5, CSS, SCSS, SASS

Frontend Development: React.js, Vue.js, Angular, Nuxt, Next.js, responsive and mobile-first web development, frontend and component architecture, state management, design systems, component libraries, accessibility standards and compliance (WCAG AA, semantic HTML5, ARIA labels and roles, keyboard navigation, color contrast, accessibility testing), cross-browser compatibility, performance optimization, HTML email development, UI/UX design, interactive design, prototyping, Figma (design handoff & implementation)

Backend Development: Node.js, REST APIs, GraphQL, headless CMS platforms, CMS architecture and development

Cloud & Infrastructure: AWS S3, AWS Lambda, AWS DynamoDB, Docker

Database & Storage: MongoDB, Redis

Testing & Other: Unit testing, Jest, A/B testing, Storybook, Adobe Analytics, Litmus, Salesforce email tooling, Zendesk CLI, Git, Adobe Creative Cloud Products - Photoshop, Illustrator and Premier, Atlassian Jira, Trello, Anthropic Claude Code AI, OneTrust integration

Professional Experience

MAY 2022 - MAY 2026

Creative Digital Developer (Frontend Developer) | Walt Disney Company

- Contributed to a scalable, reusable, internal CMS adopted by multiple teams, beginning with D23's Ultimate Fan Event (2024) at the Anaheim Convention Center (80,000+ attendees). Built a custom front end and led development of core components, modules, and front-end functionality using React, TypeScript, SCSS, Next.js, and AWS S3.
- The CMS was later adopted by the Walt Disney Archives team for their Archives Exhibit in Columbia, South Carolina, where I contributed to the development of a custom front end supporting the experience (<https://exhibits.archives.disney.com>).
- Regularly partnered with product and UI/UX to interpret Figma prototypes, clarify edge cases, and deliver polished, production-ready UIs.
- Designed and implemented two interactive web applications from scratch, catering to over 12,000 users at D23's Ultimate Fan Event (2024) using React, SCSS, and AWS S3, showcasing my ability to deliver scalable and user-friendly solutions.
- Maintained and managed the Walt Disney Archives website and Planet Possible website through the use of React and AWS S3.

- Developed and refined various custom internal tooling projects, including a bespoke CMS, reusable forms, a file uploading system, and bib builders for 5k runs, among others. These projects, leveraging React, Typescript, AWS S3, Lambda, and DynamoDB, significantly enhanced internal workflows and operational efficiency.
- Lead the integration of Adobe Analytics to our public-facing sites.
- Constructed over 40 registration sites for internal events, leveraging our proprietary event CMS. These sites achieved corporate-wide visibility and were instrumental in facilitating seamless event management.
- Crafted and deployed over 60 emails using Litmus and/or Salesforce for internal communications, ensuring high engagement and consistent messaging across the company.

MAY 2019 - MAY 2022

Software Engineer | BitPay

- Spearheaded the management and execution of all initiatives related to the BitPay website. Personally designed and implemented over 20 dynamic web pages using Vue.js, later leading the migration to Nuxt.js (<https://bitpay.com>).
- Architected and developed a comprehensive library by interpreting Sketch design mocks of over 30 reusable UI components, drastically accelerating the development process for websites and applications.
- Assisted in the development of critical dashboard features using TypeScript, including KYC verification processes, two-factor authentication systems, and invoice management
- Led the implementation of a universal cookie management solution in vanilla JavaScript across all BitPay products in response to evolving government privacy regulations, ensuring compliance while maintaining a consistent user experience.
- Set up and integrated a Zendesk-powered Help Center using JavaScript and API integration, implementing custom front-end code and configuring workflows through the Zendesk administrative interface.
- Fostered cross-functional collaboration with various teams—including legal, customer success, marketing, and human resources to ensure cohesive project outcomes and alignment with organizational goals.
- Created original illustrations in Adobe Illustrator for websites and applications, enhancing brand identity and user interaction.

Education

NOVEMBER 2018 - MAY 2019

Georgia Institute of Technology | Coding Bootcamp | MERN Stack

AUGUST 2014 - MAY 2018

Furman University | Bachelor of Arts (BA) | Graphic Design
